

1.

So, from this database we can enter customer food orders, can issue purchase receipt, weekly and monthly income reports.

- \* For stock reports we need to implement an API for this report.
- \* Web based application; because we can also take this online food order.

- \* Need to host in cloud for no 'site down' issue.
- \* We can use Docker for the machine independent advantage for ~~in~~ deploying.
- \* Also make some API for this database and show some details to the customer.
